Your vehicle's engine speed sensor, or vehicle speed sensor as it is also known, sends information to your car's computer about how fast the car's engine is spinning at any particular moment.The sensor does this by recording how fast the crankshaft of your vehicle is spinning. A faulty speed sensor can cause all sorts of strange problems in your car.

How to Tell if You Have a Faulty Engine Speed Sensor ...

Engine speed is in blue, the vehicle speed sensor is gray. After the log, the needle started dropping lower and lower and eventually read zero. The speed sensor had totally failed. Note: the car runs just fine with a dead sensor. I noticed a very slight hesitation sometimes when starting from a stop, nothing critical.

Falling speed sensor: diagnosis and repair - TDIClub Forums

The presence of a stored code P0725 means that the powertrain control module (PCM) has detected a circuit malfunction with the engine speed sensor input signal. The engine speed input sensor is sometimes called the transmission input speed sensor and the input speed sensor. This type of code may be caused by a mechanical problem or an electrical problem. The engine speed input speed sensor is usually inserted through the transmission case, near the front of the input shaft.

P0725 Engine Speed Input Circuit Malfunction

The transmission speed sensors are used to calculate the actual gear ratio of the transmission while in use. There are generally two speed sensors that work in conjunction to provide accurate transmission data to the vehicle's powertrain control module. The first is known as the input shaft speed (ISS) sensor.
