PPG Aerospace Surface Solutions

The BAC 5625 specification also includes a number of passivation baths containing sodium dichromate, and these bath can also be analyzed using the present method. The QQ-P-35, AMS2700 and ASTM A967 specify a range of sodium dichromate concentration between 2.0% and 3.0% by weight.

Anoplex Software : Passivate T2 Titration

Even more interesting, only Boeing in BAC 5625 correctly specifies to use dichromate treatment only on parts with tight openings: for all other parts this treatment is simply useless.

Purpose of sodium dichromate in QQ-P-35C passivation solution
