Hi - RESOLVED: It was indeed the Mass Airflow Sensor. I have a 2013 Mazda CX-5 2.0l 4cyl w/ AWD and 65,000 miles and everything had been fine so far today but then I go to start the car and it immediately dies.

2013 Mazda CX-5 - Starts and Dies : Cartalk

While conventional diesel engine idling stop systems require two engine cycles to restart, Mazda's unique i-stop needs just one cycle, thanks to its precise control of the piston positions. As a result, i-stop achieves the world's fastest diesel engine restart time of approximately 0.40 seconds (internal measurement on vehicles with automatic ...

MAZDA: Idling Stop Technology | Environmental Technology

I've a Vauxhall Astra G with Z14XEP petrol engine. For 6 month, at 1st start in the morning, engine starts, then dies right after starting, but after 2nd start everything is fine & I can drive hundreds of miles. The engine always starts until the first start of the next day. At beginning, it occurd rarely, but it is more & more common.

Car Starts Then Dies - YouTube

These are the start and the run modes. When starting the engine, the ignition module goes into the start mode. This allows full battery voltage to reach the coil(s) to ensure that a cold engine starts. When the ignition switch is released and moves from the start position into the run position, the ignition module switches over to the run mode.
