Split-System Air Conditioners | Amazon.com

A split air conditioner is composed of two separate units, a condensing unit and an evaporative coil (known as a "condenser," and a "coil" respectively in short-hand or slang). It is from these two separate units that a split air conditioner gets its name. These units are joined by a set of copper tubing known as a "line-set," which transfers refrigerant from one unit to another.

What is a Split Air Conditioner? Split vs Packaged AC Units

Free Resource Split System Air Not too hot, not too cold - split system air conditioning that's just right! Say goodbye to sticky, stifling summer heat and teeth-chattering cold with a split system air conditioner. A split system air conditioner, paired with a gas furnace will provide year-round protection against temperature variation. With these systems, your indoor component will contain a gas furnace with an evaporator coil resting on top.

What is a Split System | Frigidaire HVAC

An HVAC split system requires linked interior and exterior components.

What is a Split System? • Ingrams Water & Air

A dual fuel system may come in the form of a packaged unit or a split system with two energy sources: the electric heat pump and a gas furnace. Dual fuel technology combines the cooling and heating performance that you get from a heat pump with the consistent heating capacity of a gas furnace. What makes this system so precise and energy efficient for heating is that it seamlessly alternates between the two energy sources for heating comfort, depending on your specific outdoor conditions.
