current—in transmission lines is usually handled by employing phasor analysis. In this context, it is crucial to understand that, in general, there are two waves traveling in opposite directions and that their relative phase changes along the line. Consequently, a standing wave is produced for voltage and current.

Propagation Constant of a Transmission

line. The propagation constant for any conducting lines (like copper lines) can

be calculated by relating the primary line parameters. $\gamma = \sqrt{ZY}$

Where, $Z = R + i\omega L$ Series impedance of line per unit length.

$Y = G + i\omega C$ The shunt admittance of line per unit length.

Propagation Constant - Definition, Derivation, Formula

Transmission lines may also be dispersive, which means the propagation velocity on the line is not constant with frequency For example the frequency components of square wave (re- call odd harmonics only) each propagate at a different velocity, meaning the waveform becomes smeared Dispersion is very important to high speed digital transmission (fiber optic and wired networks alike) The longer the line, the greater the impact

Wave Propagation, Transmission Lines, and Antennas

The line-of-sight propagation will not be smooth if there occurs any obstacle in its transmission path. As the signal can travel only to lesser distances in this mode, this transmission is used for infrared or microwave transmissions. Ground Wave Propagation. Ground wave propagation of the wave follows the contour of earth.

A transmission line connects a generator to a load - a two port network

Transmission lines include (physical construction):

- Two parallel wires
- Coaxial cable
- Microstrip line
- Optical fiber
- Waveguide (very high frequencies, very low loss, expensive)
- etc.

INTRODUCTION TO TRANSMISSION LINES

These are wave equations which have plane waves with equal propagation speed in the forward and reverse directions as solutions. The physical significance of this is that electromagnetic waves propagate down transmission lines and in general, there is a reflected component that interferes with the original signal.
